NAME: SUNIL KUMAR NALLABOTULA

mail: johnmarkjmk3092020@gmail.com

1. Project Description

In this project we are going to understand how the operations are work in a organization and analyze the company operations and helps organization to take many decisions based on the previous data

Making the data driven decisions helps organizations to understand the business performance and their processes exactly, and it helps to mitigate the losses comes in future and understand where the company need to improve their Operations exactly.

And one of the major problem in a company is investigating the metrics of an operations of a company. It involves Understanding and exploring the sudden changes in the major metrics of operations.

So In this project we are gonna understand a lot about operaton analytics and the investigation of them and their metrics.

In this project we are working with 4 Major tables of database
Named as

1. Jobdata
2. Users
3. Email_events
4. Events_users

Each table has it's specific attributes and their valid data In them,

2. Approach

Case Study I

- Working with the jobdata table

Task A: Reviewing Job Over Time

In this task we are going to make some calculations on number of jobs are reviewed per hour in each day in November 2020.

- These are total no of jobs reviewed per hour in each day of November 2020

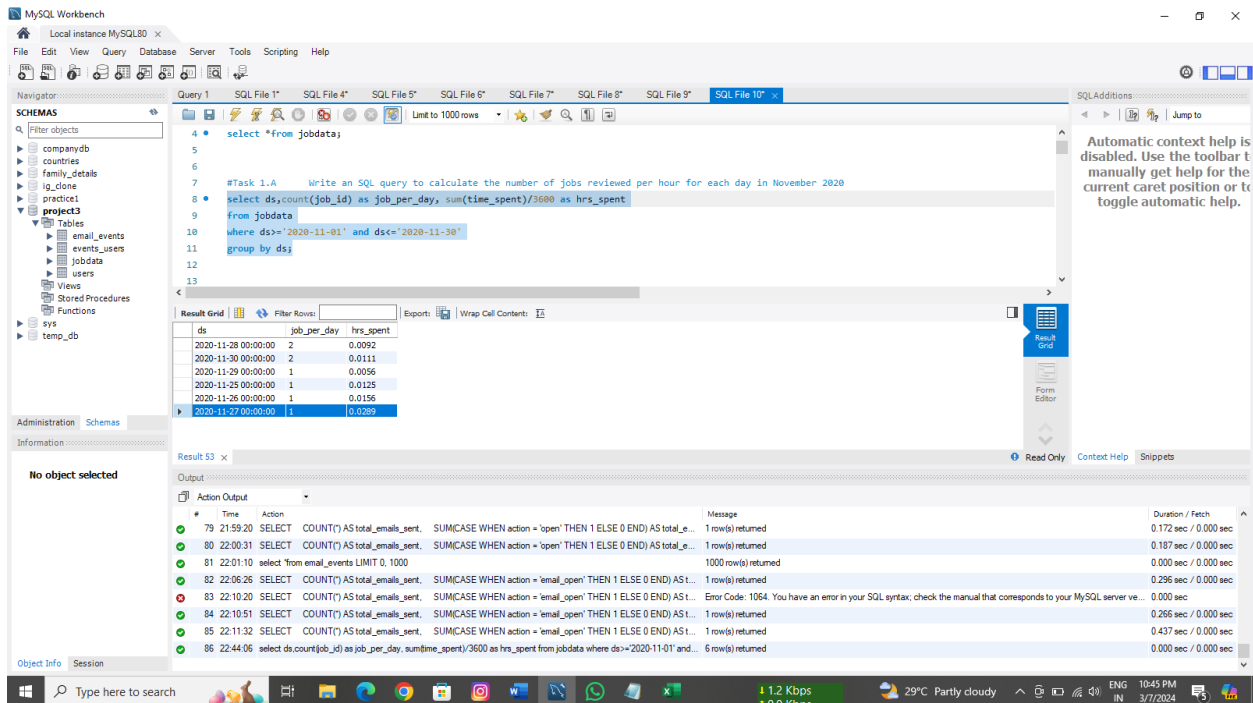

ds	job_per_day	hrs_spent
2020-11-28 00:00:00	2	0.0092
2020-11-30 00:00:00	2	0.0111
2020-11-29 00:00:00	1	0.0056
2020-11-25 00:00:00	1	0.0125
2020-11-26 00:00:00	1	0.0156
2020-11-27 00:00:00	1	0.0289

- this is the sql Query has used to extract them,

Code:

```
select ds,count(job_id) as job_per_day, sum(time_spent)/3600 as  
hrs_spent  
from jobdata  
where ds>='2020-11-01' and ds<='2020-11-30'  
group by ds;
```

- this is the screen shot of the out put

Task B: Throughput Analysis

In this task we are going to Calculate the 7-day rolling average of throughput and decide which payment method is suitable

➤ these are the results of 7 days rolling average of the throughput

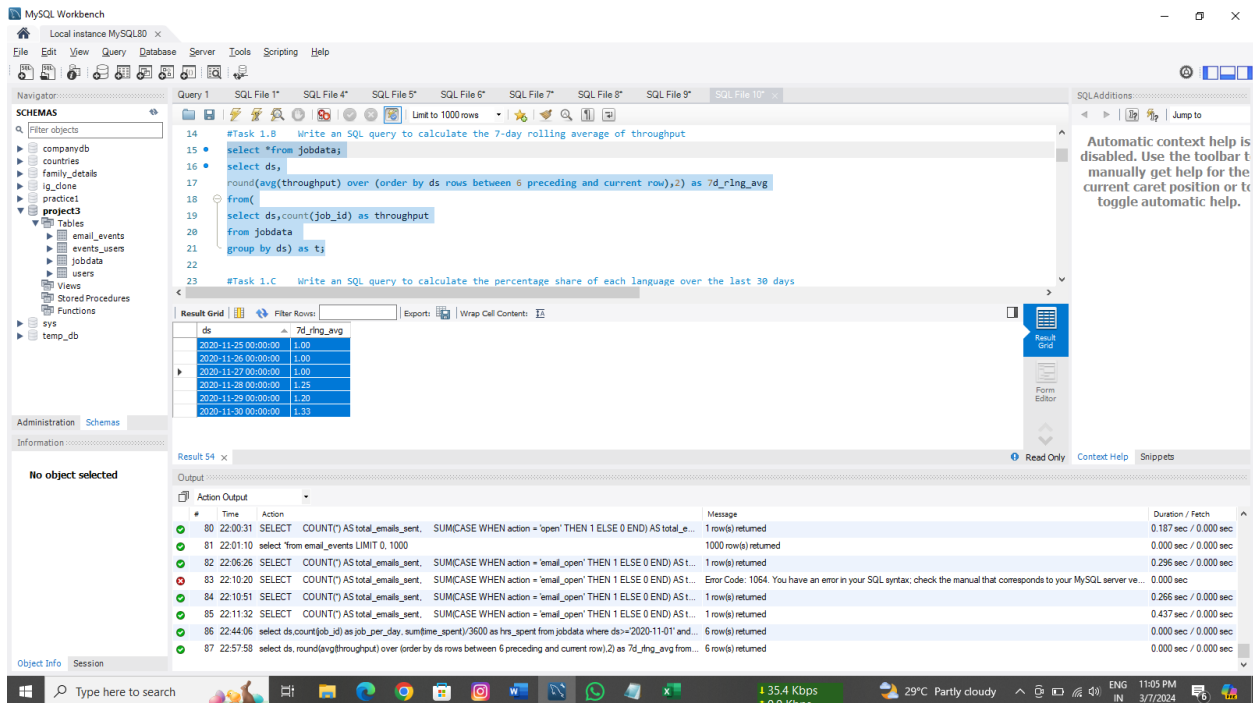

Date	7 days rolling average
2020-11-25 00:00:00	1.00
2020-11-26 00:00:00	1.00
2020-11-27 00:00:00	1.00
2020-11-28 00:00:00	1.25
2020-11-29 00:00:00	1.20
2020-11-30 00:00:00	1.33

- and based on analysis I would prefer to pay or use the method of paying for 7 day rolling rather than daily basis or metric, this is because compare to daily metrics it has high stability and less fluctuations.
- So I would prefer the mode of 7 day pay role.
- this is the sql Query has used to extract and decide them

Code:

```
select *from jobdata;  
select ds,  
round(avg(throughput) over (order by ds rows between 6 preceding  
and current row),2) as 7d_rlng_avg  
from(  
select ds,count(job_id) as throughput  
from jobdata  
group by ds) as t;
```

- this is the screen shot of the output

Task C: Language Share Analysis

In this task we are going to understand the percentage share of each language in the last 30 days.

- these are the results of percentage share of each language in the last 30 days.

Language	Percentage_Share
Hindi	100.00
English	100.00
Persian	100.00
Arabic	100.00
Italian	100.00
French	100.00

- this is the sql Query has used to extract and decide them,

Code:

```
select *from jobdata;  
SELECT language,  
        ROUND(100 * SUM(CASE WHEN event IN ('decision', 'skip',  
        'transfer') THEN 1 ELSE 0 END) / COUNT(*), 2) AS  
percentage_share  
FROM jobdata  
WHERE ds BETWEEN '2020-11-25' AND '2020-11-30'  
GROUP BY language;
```

- this is the screen shot of the output

The screenshot displays the MySQL Workbench interface. The main window shows a SQL query in the editor, which is the same query provided in the text block. The query is executed, and the results are displayed in the 'Result Grid' pane. The results show the percentage share for each language over the specified date range.

language	percentage_share
Hindi	100.00
English	100.00
Persian	100.00
Arabic	100.00
Italian	100.00
French	100.00

The bottom pane shows the 'Action Output' tab, which displays the execution progress and messages for each statement. The messages indicate that the queries were executed successfully, with the final query returning 6 rows.

Task D: Duplicate Rows Detection

In this task we are going to understand duplicate rows in the data.

➤ these are the results of duplicate rows in the data,

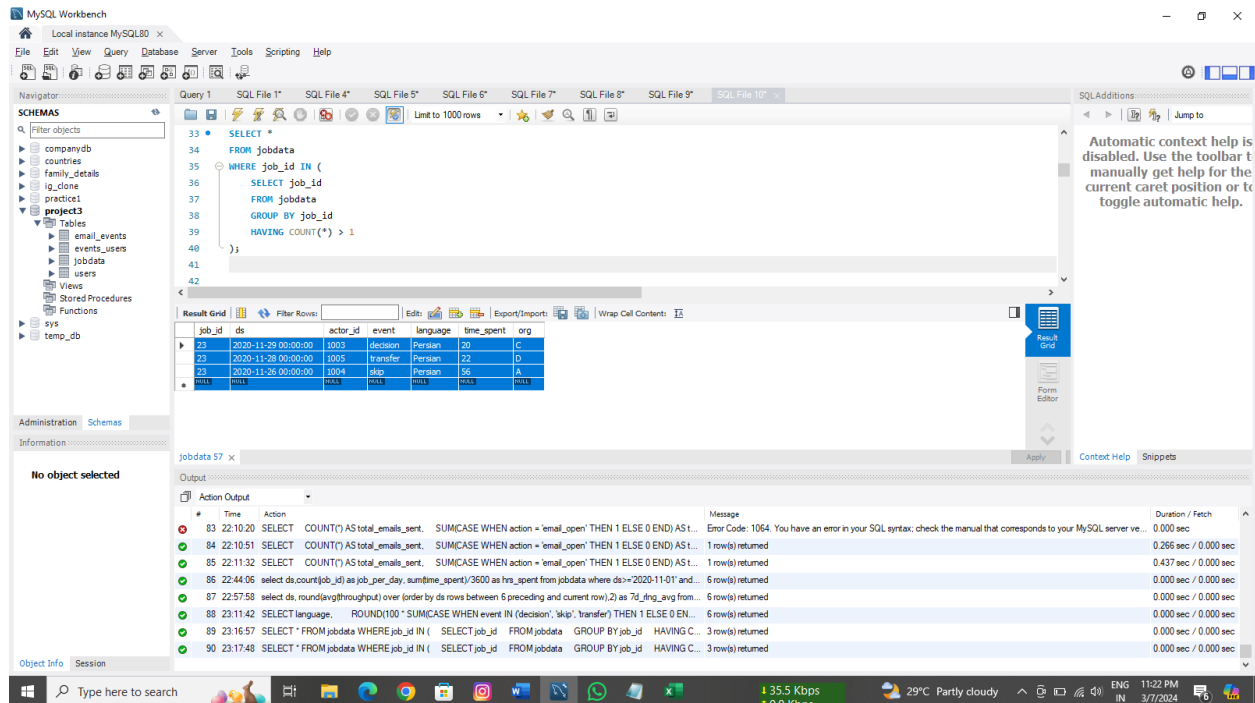

Job_id	date	Actor_id	event	language	Time_spent	oraganisation
23	2020-11-29 00:00:00	1003	decision	Persian	20	C
23	2020-11-28 00:00:00	1005	transfer	Persian	22	D
23	2020-11-26 00:00:00	1004	skip	Persian	56	A

➤ this is the sql Query has used to extract and decide them,

Code:

```
SELECT *  
FROM jobdata  
WHERE job_id IN (  
    SELECT job_id  
    FROM jobdata  
    GROUP BY job_id  
    HAVING COUNT(*) > 1  
);
```

➤ this is the screen shot of the output

Case Study II

In this case study we are going to work with three tables

1. users
2. events
3. email_events

Task A: Weekly User Engagement

In this task we are going to Measure the activeness of users on a weekly basis

➤ these are the results of duplicate rows in the data,

2014-34	4458	22594
2014-35	4577	22832

➤ this is the sql Query has used to extract and decide them,

Code:

SELECT

DATE_FORMAT(occurred_at, '%x-%v') AS week,

COUNT(DISTINCT user_id) AS active_users,

COUNT() AS total_events*

FROM (

SELECT user_id, occurred_at FROM events_users

UNION ALL

SELECT user_id, occurred_at FROM email_events

) AS combined_events

GROUP BY week

ORDER BY week;

➤ this is the screen shot of the output,

The screenshot shows the MySQL Workbench interface. The SQL editor contains the following query:

```
SELECT
  DATE_FORMAT(occurred_at, '%x-%v') AS week,
  COUNT(DISTINCT user_id) AS active_users,
  COUNT(*) AS total_events
FROM (
  SELECT user_id, occurred_at FROM events_users
  UNION ALL
  SELECT user_id, occurred_at FROM email_events
) AS combined_events
GROUP BY week
ORDER BY week;
```

The Results tab displays the output in a table with the following data:

week	active_users	total_events

➤ this is the screen shot of the output,

The screenshot shows the MySQL Workbench interface. The SQL editor contains the following query:

```

SELECT
    cohort_week,
    week_number,
    ROUND((COUNT(DISTINCT CASE WHEN week_number = 0 THEN user_event_data.user_id END) / NULLIF(COUNT(DISTINCT user_event_data.user_id), 0)) * 100, 2) AS
    retention_rate
FROM (
    SELECT
        events_users.user_id,
        DATE_FORMAT(users.created_at, '%x-%v') AS cohort_week,
        DATEDIFF(events_users.occurred_at, users.created_at) DIV 7 AS week_number
    FROM
        events_users
    JOIN
        users ON events_users.user_id = users.user_id
) AS user_event_data
GROUP BY
    cohort_week, week_number
ORDER BY
    cohort_week, week_number;

```

The Results window displays the following data:
